(III SEMESTER & IV SEMESTER)
SCHEME OF EXAMINATION & SYLLABUS

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING
FACULTY OF ENGINEERING AND TECHNOLOGY
GURUKULA KANGRI (DEEMED TO BE UNIVERSITY),
HARIDWAR

## Faculty of Engineering & Technology

In the year 2000 Faculty of Engineering & Technology was established with an aim of imparting technical education in the spiritual surroundings of the Gurukula System. Keeping in mind the importance of technocrats with strong moral character, superior knowledge, and devotion to the nation. FET was established with a motto of Building Technocrats with ethics. FET is known in India and abroad for students with virtuous moral character and Technical abilities. Currently, it is providing education in B. Tech. in Computer Science & Engineering, Electronics & Communication Engineering, Electrical Engineering, and Mechanical Engineering. FET is one of the richest faculty of Gurukula Kangri (Deemed to be University), with a huge number of books in the library, well-equipped electronics electrical and mechanical laboratories, latest software, and computers in computer labs. Football field, Tennis court, Volleyball court, Basketball arena, and open gym for the students with athletic interests.

#### Vision of F.E.T.

To provide affordable & quality education to engineering aspirants and nurture them to be highly skilled & innovative technocrats with ethics and nation building spirit.

#### Mission of F.E.T.

#### M1: (ETHICS & VALUES)

To educate and nurture engineering aspirants with values, updated engineering curriculum & latest technology to make them globally trusted and accepted.

#### M2: (RESEARCH)

Provide conducive environment for teaching, learning & research that can lead to patents, publications and make country proud.

#### M3: (AFFORDABILITY)

Provide cost effective education so that every section of society can be benefitted.

#### M4: (SKILLED)

Design industry oriented curriculum that can make engineering graduates ready to work for Indian Industries as well as MNCs.

## Department of Computer Science & Engineering

The Department of Computer Science and Engineering (CSE) provides in-depth technical knowledge and opportunities for innovation and research with the latest computer facilities.

#### Vision And Mission

#### Vision of the department

To be a frontier in the field of Computer Science by imparting the knowledge in legible, lucid and perspicuous way and preparing the human resource of high moral and ethical values that can cater to contemporary societal needs.

#### Mission of the department

#### • [M1]: (Contemporary excellence)

Provide a sound technical foundation in Computer Engineering through the comprehensive curriculum with a rich skill set and practical experience.

#### • [M2]: (Holistic Learning)

To enable students to become valuable and creative contributors to society. To continue their education in different facets of technology to grow them professionally along with the spirit of moral values.

#### • [M3]: (Social Responsibility & Sustainable Development)

To contribute to National Development by meeting the needs of society and industry, empowering weaker and underprivileged sections, and building the economy through research and frugal innovation, anchored in the principle of achieving more with less.

#### • [M4]: (Ethics & Values)

To uphold the highest ethical standards, inculcate values; create willingness and capacity to work with one's hands, and a spirit of devotion to serve humanity.

#### **Program Educational Objectives (Under Graduate Program)**

- **PEO1:** To provide a cogent foundation in Basic Sciences, analytical skills and engineering fundamentals required to succeed in engineering field.
- **PEO2:** To provide knowledge of various domains catering to the contemporary requirements of the industry.
- **PEO3:** To train students with good scientific and practical engineering application skills to comprehend, analyze, design, and create feasible solutions for societal vows.
- **PEO4:** Inculcate analytical reasoning and critical thinking through effective teaching learning and hands-on training to develop an innovative spirit and pursue higher education for nation-building.
- **PEO5:** To encourage students to develop lifelong learning skills, self-motivation, and high moral and ethical values for a successful professional career.

#### **Program Specific Outcomes (Under Graduate Program)**

- **PSO1:** Graduates of Computer Science & Engineering will achieve the adequate understanding of the contents to analyze, design and implement sustainable solution in their domain.
- **PSO2:** Able to use problem-solving skills to develop efficient algorithmic solutions.

## B. Tech (CSE) - Working Professional

#### 1. Introduction

The B. Tech (CSE) working professional program has been designed for individuals who want to advance their careers in computer science engineering along with job. This program allows students to gain practical experience and develop fundamental engineering skills through hands-on learning opportunities. In a B.Tech working professional program(Working professional), eligible applicants get admission directly into the program's second year. This is as per AICTE guidelines because the eligible candidates already have the basic foundational knowledge of the subject from their prior relevant qualifications and so they can directly start studying in the second year of the B.Tech program.

The course spans 6 semesters over a period of 3 years and is tailored to meet the needs of students who are looking to fast-track their career growth in their respective fields. The curriculum has been carefully crafted to ensure that students gain the necessary knowledge and skills to enhance their prospects in their chosen field.

The engineering program is tailored for working professionals who already have experience in their field and relevant qualifications, providing them with the opportunity to enhance and expand their technological skills within their specific area of expertise.

B.Tech (CSE) working professional program covers essential engineering concepts, tools, techniques, and best practices. The course is designed in accordance with the Approval Process Handbook issued by AICTE, which guarantees its broad acceptance across India.

By enrolling in this course, students will acquire the essential skills needed to take advantage of the abundant opportunities in their field and accelerate their career growth.

#### **Program Highlights**

- 1. B. Tech Working Professional program spans 6 semesters and is intended to equip students with an extensive knowledge of cutting-edge technologies. The program places a strong emphasis on the fundamental principles of engineering and their practical application in relevant fields.
- Prospective candidates must have completed a Diploma program/ Graduation for admission. Furthermore, they
  should have a minimum of one years of full-time work experience in Registered Industry / Organization (Centra I
  / State) / Private/ Public Limited Company/ MSMEs located within 50 Km radial distance.
- 3. The B.Tech working professional program, adheres to the guidelines set by the All India Council for Technical Education (AICTE) in the Approval Process Handbook that is periodically released.

#### w.e.f. 2024 (Revised 08/07/24)

- 4. The B. Tech working professional employs a variety of assessment methods to continually evaluate student performance, including sessional examinations, quizzes, assignments, practical sessions, and semester examinations. The assessment results are shared with students to assist them in evaluating their performance throughout the learning process.
- 5. The program aims to spark technical curiosity and promote learning in the ever-evolving engineering landscape.

#### **Eligibility Criteria**

#### Qualification:-

- 1. To be eligible for admission into the B. Tech (CSE) working professional, candidates must possess a 3-year polytechnic diploma / Graduation (B. Sc).
- 2. Additionally, they must have at least 1 year of full-time work experience in Registered industry / Organization (Centra I / State) / Private/ Public Limited Company/ MSMEs located within 50 Km radial distance.
- 3. This program is tailored to professionals with relevant experience who want to expand their skills and knowledge and attain complete competence in essential industry-relevant domains.

#### Age Criteria:-

- 1. There are no age restrictions for admission to this course, making it accessible to individuals of all ages.
- 2. We encourage ambitious and motivated working professionals who want to advance their careers by obtaining a comprehensive understanding of engineering principles and fundamentals to apply for this course.

#### **Admission Process**

Admission will be based on Merit of the Qualifying examination.

## **ACADEMIC SESSION 2023-24**

(Effective from the academic session 2023-24)

## Course Code: BCE-C305/BCE-C405 Course Name: DATA STRUCTURE - I

MM: 100
Time: 3 Hr.

L T P
Credit: 3
3 0 0

| Prerequisites:        | None  |
|-----------------------|---|
| Objectives:           | <ol> <li>Analyze the asymptotic performance of algorithms.</li> <li>Write rigorous correctness proofs for algorithms.</li> <li>Demonstrate a familiarity with major algorithms and data structures.</li> <li>Apply important algorithmic design paradigms and methods of analysis.</li> <li>Synthesize efficient algorithms in common engineering design situations.</li> </ol> |
| Course<br>Coordinator | Dr. <u>Suyash Bhardwaj</u>  |

| NOTE: | The question paper shall consist of two sections (Section-A and Section-B). Section-A shall         |
|-------|---|
|       | contain Ten (10) short answer type questions of six (06) mark each and student shall be required to |
|       | attempt any five (05) questions. Section-B shall contain eight (08)long answer type questions of    |
|       | ten (10) marks each and student shall be required to attempt any four questions. Questions shall be |
|       | uniformly distributed from the entire syllabus  |

| Module   | Course Content  | No. of | POs              | PSOs   |
|----------|---|--------|------------------|--------|
|          |   | Hours  | mapped           | mapped |
| Module-1 | Introduction to Algorithm Design and Data Structure:  Design & analysis of algorithm, Top-down and Bottom-up approaches to algorithm design, Analysis of Algorithm, Frequency count, Complexity measures in terms of time and space.  Arrays, Stacks and Queues: Representation of Array (Single & Multi-Dimensional Arrays), Address Calculation using column & row major Ordering, Array and linked representation and implementation of queues. Applications of Arrays, Stacks & Queues; Conversion from Infix to Postfix & Prefix and Evaluation of Prefix expressions using Stack, Array and linked representation and implementation of queues, Operations on Queue: Create, Add, Delete, Full and Empty. Circular queue, | 10     | 1,2,9,12         | 1      |
|          | Deque and Priority Queue  |        |                  |        |
| Module-2 | Linked List: Representation and Implementation of Singly Linked List, Two-way Header List, Traversing and Searching of Linked List, Overflow and Underflow, Insertion and Deletion to/from Linked List, Insertion and Deletion Algorithms, doubly linked List, Linked List in Array, Polynomial representation and addition, generalized linked list, Uses and Application  | 07     | 1,2,3,9,12       | 1      |
| Module-3 | Trees: Basic terminology, Binary Trees, Binary Tree Representation, Algebraic Expressions, Complete Binary Tree. Extended Binary Trees, Array and Linked representation of Binary trees, Traversing Binary trees.  Binary Search Tree: Binary Search Tree (BST), Insertion and Deletion in BST, Complexity of search algorithm, Path Length, AVL Tree, Balancing in AVL Trees, B-trees, uses and applications.  | 07     | 1,2,3,9,12       | 1,2    |
| Module-4 | Graphs: Introduction, Definition, Directed and undirected graph, Degree, incidence, adjacent vertices, path, cycle, connected and unconnected graph, complete graph, connectedness, weighted graph, subgraph, spanning trees.  Graph Representation: Adjacency matrix, adjacency list, Incidence matrix. Traversal of graph: Depth first search,  | 08     | 1,2,3,4,9,<br>12 | 1,2    |

w.e.f. 2024 (Revised 08/07/24)

| Breadth first search. Shortest path problem, Dijkstra's algorithm. Minimum spanning tree, Kruskal's algorithm, prim's algorithm  |    |             |     |
|--|----|-------------|-----|
| <ul> <li>Module-5</li> <li>Searching: Sequential Search, Binary Search, Comparison and implementation.</li> <li>Sorting: Insertion Sort, Bubble Sorting, Quick Sort, Two-way Merge Sort, Heap Sort, Sorting on Different Keys, Practical consideration for Internal Sorting.</li> <li>Hashing: Hash table, Hash Functions, Collision Resolution Strategies, Hash Table Implementation. Uses and applications.</li> </ul> | 08 | 1,2,3,4,5,9 | 1,2 |
| Total No. of Hours   | 40 |             |     |

## Learning Outcomes:

- Design correct programs to solve problems.
- Choose efficient data structures and apply them to solve problems.
- Analyze the efficiency of programs based on time complexity.
- Prove the correctness of a program using loop invariants, pre-conditions, and post-conditions in programs
- Develops skills in implementations and applications of data structures.

## Course Code: BCE-C306 Course Name: Computer Architecture and Organization

MM: 100
Time: 3 Hr.

L T P
Credit: 3
3 0 0

| Prerequisites: | None  |
|----------------|---|
| Objectives:    | <ol> <li>The purpose of the course is to introduce principles of computer organization and the basic architectural concepts.</li> <li>It begins with basic organization, design, and programming of a simple digital computer and introduces simple register transfer language to specify various computer operations.</li> <li>Topics include computer arithmetic, instruction set design, microprogrammed control unit, pipelining and vector processing, memory organization and I/O systems, and multiprocessors</li> </ol> |
| Course         | Dr. Aman Tyagi  |
| Coordinator    |   |

| NOTE: | The question paper shall consist of two sections (Section-A and Section-B). Section-A shall contain Ten (10) short answer type questions of six (06) mark each and student shall be required to attempt |
|-------|---|
|       | any five (05) questions. Section-B shall contain eight (08) long answer type questions of ten (10)  |
|       | marks each and student shall be required to attempt any four questions. Questions shall be uniformly  |
|       | distributed from the entire syllabus.   |
|       |   |

| Module   | Course Content  | No. of<br>Hour | POs<br>mapped | PSOs<br>mapped |
|----------|---|----------------|---------------|----------------|
| Module-1 | Register Transfer Language, Bus and Memory Transfers, Bus Architecture, Bus Arbitration, Arithmetic Logic, Shift Micro-operation, Arithmetic Logic Shift Unit, Arithmetic Algorithms (addition, subtraction, Booth's Multiplication), IEEE standard for Floating point numbers  | 08             | 1,2           | 1              |
| Module-2 | Control Design: Hardwired & Micro Programmed Control Unit, Fundamental Concepts (Register Transfers, performing of arithmetic or logical operations, fetching a word from memory, storing a word in memory), Execution of a complete instruction, Multiple-Bus organization, Microinstruction, Microprogram sequencing, Wide-Branch addressing, Microinstruction with Next-address field, Prefetching Microinstruction. | 09             | 1,2,3         | 1              |
| Module-3 | Processor Design: Processor Organization: General register organization, Stack organization, addressing mode, Instruction format, Data transfer & manipulations, Program Control, Reduced Instruction Set Computer (RISC), Complex Instruction Set Computer (CISC).   | 09             | 1,2,3,5       | 1,2            |
| Module-4 | Input-Output Organization: I/O Interface, Modes of transfer, Interrupts & Interrupt handling, Direct Memory access, Input-Output processor, Serial Communication  | 08             | 1,2,3,4,6     | 1,2            |
| Module-5 | Memory Organization: Memory Hierarchy, Main Memory (RAM and ROM Chips), organization of 2D, Auxiliary memory, Cache memory, Virtual Memory, Memory management hardware.   | 06             | 1,2,3,4,      | 1,2            |
| TOTA     | AL 40   |                |               |                |

| Learning         | List various types of microoperations and arithmetic algorithms                                       |
|------------------|---|
| <b>Outcomes:</b> | <ul> <li>Elaborate the concept of control design and microinstruction</li> </ul>                      |
|                  | <ul> <li>Illustrate Processor Organization, addressing mode, Instruction format</li> </ul>            |
|                  | <ul> <li>Compare the Reduced Instruction Set Computer (RISC) &amp; Complex Instruction Set</li> </ul> |
|                  | Computer (CISC) and Hardwired & Micro Programmed Control Unit   |
|                  | <ul> <li>Explain the concept of Input-Output Organization, Memory Organization</li> </ul>             |

## Course Code: BCE-C354 Course Name: Python Programming Lab

MM: 50
Time: 3 Hr.

L T P
Credit: 01
Credit: 01

| Objectives:           | <ol> <li>To demonstrate Python data structures like Strings, Lists, Tuples, Sets, and dictionaries.</li> <li>To understand Functions, generators, comprehension, and Operators in Python Programming.</li> </ol>  |
|-----------------------|---|
| Course<br>Coordinator | Mr. Namit Khanduja  |
| NOTE:                 | <ol> <li>In practical examination, the student must perform one experiment.</li> <li>A teacher shall be assigned 20 students for daily practical work in the laboratory.</li> <li>No batch for a practical class shall consist of more than 20 students.</li> <li>The number of students in a batch allotted to an examiner for practical examination shall not exceed 20 students.</li> <li>Addition/deletion in above list may be made in accordance with the facilities available with the approval of H.O.D./Dean.</li> </ol> |

| LIST OF EXPERIMENTS  | No. of Hours<br>/ Week | POs mapped     | PSOs<br>mapped |
|--|------------------------|----------------|----------------|
| 1. Programs with variables, lists, tuples, dictionaries                      | 02                     | 1,2,3          | 1,2            |
| 2. Programs for functions, lambda functions, and various function parameters |                        | 1,2,3          |                |
| 3. Programs for operators and string operations.                             |                        | 1,2,3          |                |
| 4. Milestone projects  |                        | 1,2,3          |                |
| 5. Compulsory Capstone Project   |                        | 1,2,3,4,5,9,12 |                |

| Learning | CO1 Knowledge (Remembering): List and explain basic programming concepts in Python, such as variables,            |
|----------|---|
| Outcomes | loops, and conditionals.  |
|          | CO2 Comprehension (Understanding): Demonstrate an understanding of the principles of input/output                 |
|          | operations and error handling in Python.  |
|          | CO3 Application (Applying): Construct Python programs that utilize functions and modules to solve real-world      |
|          | tasks.  |
|          | CO4 Analysis (Analyzing): Analyze and identify errors in Python code, offering explanations and solutions.        |
|          | Break down complex programming problems into smaller, manageable components.                                      |
|          | CO5 Synthesis (Creating): Design and create original Python programs to address complex tasks or problems.        |
|          | Combine various Python concepts, data structures, and libraries to develop functional and efficient applications. |

|                    | CO-PO/PSO MAPPING |                        |     |     |     |     |     |     |     |     |      |      |      |                                     |  |  |

## Course Code: BCE-C355/BCE-C454 Course Name: Data Structure 1 Lab

MM: 50
Time: 3 Hr.

L T P
Credit: 01
0 0 2

| Objectives:           | <ol> <li>To develop skills to design and analyze simple linear and non-linear data structures.</li> <li>To develop skills to implement searching and sorting.</li> </ol> |
|-----------------------|--|
| Course<br>Coordinator | Dr. Suyash Bhardwaj  |

| NOTE: | 1. In practical examination the student shall be required to perform one experiment.                         |
|-------|--|
|       | 2. A teacher shall be assigned 20 students for daily practical work in laboratory.                           |
|       | 3. No batch for practical class shall consist of more than 20 students.                                      |
|       | 4. The number of students in a batch allotted to an examiner for practical examination shall not exceed 20   |
|       | students.  |
|       | 5. Addition/deletion in above list may be made in accordance with the facilities available with the approval |
|       | of H.O.D./Dean   |

| LIST OF EXPERIMENTS                                     | No. of Hours/<br>Week | POs<br>mapped | PSOs<br>mapped |
|---|-----------------------|---------------|----------------|
| 1. Array implementation of Stack.                       | 02                    | 1             | 1,2            |
| 2. Array implementation of Queue.                       |                       | 1             | 1,2            |
| 3. Array implementation of Circular Queue.              |                       | 1             | 1,2            |
| 4. Implementation of Linked List.                       |                       | 2             | 1,2            |
| 5. Implementation of Circular Linked List               |                       | 2             | 1,2            |
| 6. Implementation of Doubly Linked List                 |                       | 2             | 1,2            |
| 7. Implementation of Stack using list.                  |                       | 3             | 1,2            |
| 8. Implementation of Queue using list.                  |                       | 3             | 1,2            |
| 9. Implementation of Binary Search Tree.                |                       | 4             | 1,2            |
| 10. Insertion and Deletion in BST.                      |                       | 4             | 1,2            |
| 11. Implementation of Searching and Sorting Algorithms. |                       | 5             | 1,2            |
| 12. Implementation of a hash function.                  |                       | 5             | 1,2            |

| Learning<br>Outcomes: | <ul> <li>Develop program for stack, queue and circular queue</li> <li>Compile linked list, Circular linked list, doubly linked list via program</li> <li>Apply list in stack and queue via programs</li> </ul>            |
|-----------------------|---|
|                       | <ul> <li>Tappry has in stack and queue via programs</li> <li>Create and delete from Binary search tree via programs</li> <li>Illustrate different types of searching and sorting algorithms by making programs</li> </ul> |

Course Code: BCE-S361
Course Name: Seminar

MM: 50
Time: 3 Hr.

L T P

Sessional: 50
ESE: 0
Credit: 1

0 0 2

#### **Objectives:**

The course has following objectives:

- Develop speech preparation and presentation techniques, audience awareness and self-awareness along with the cultivation of self-confidence.
- Demonstrate the ability to present scientific material in visual, written and oral form including the formulation of an effective presentation on a topic in the Computer Science domain.
- Demonstrate an ability to listen to a scientific presentation with the discussion of the strengths and weaknesses of a speaker's presentation.

#### **Outcomes:**

Students would be able to improve their presentation skills and work towards enhancing their self-confidence. This course helps the students to explore a domain of computer science and exploit their interest to demonstrate the ability to present scientific material in visual, written and oral form.

- 1. Introduction and Presentation Basics
  - a. Extemporaneous delivery approach.
  - b. Information on likes/dislikes, hobbies, family, career goals, etc.
  - c. Overcoming the challenges of public speaking and understanding body language.
- 2. Preparation for an Oral Presentation
  - a. Key considerations: audience, purpose, organization, flow, and style.
  - b. Importance of designing effective presentations and using visual aids.
- 3. Types of Speeches and Their Purposes
  - a. Demonstration/How-To Speech: providing valuable information via visual aids.
  - b. Informative Speech: explaining concepts, policies, ideas, people, locations, or events using visual aids.
  - c. Persuasive Speech: establishing problems and offering solutions with references and visual aids.
- 4. Language and Structure of Presentations
  - a. Explaining the title, outline, and summary.
  - b. Describing background, problem, materials, methods, and processes.
  - c. Discussing data through figures and tables.
- 5. Interaction and Final Presentation
  - a. Understanding and answering audience questions.
  - b. Delivering a coherent and impactful final presentation.

## Course Code: BCE-C408 Course Name: Database Management System

MM: 100
Time: 3 Hr.

L T P
Credit: 3
3 0 0

| <b>Prerequisites:</b> |   |
|-----------------------|---|
| Objectives:           | The course, Database Management Systems, provides an introduction to the management of database systems. The course emphasizes the understanding of the fundamentals of relational systems including data models, database architectures, and database manipulations. The course also provides an understanding of new developments and trends such as Internet database environment and data warehousing. The course uses a problem-based approach to learning |
| Course                | Dr. Nishant Kumar   |
| Coordinator           |   |
|                       |   |

| NOTE: | The question paper shall consist of two sections (Section-A and Section-B). Section-A shall contain Ten    |
|-------|--|
|       | (10) short answer type questions of six (06) mark each and student shall be required to attempt any five   |
|       | (05) questions. Section-B shall contain eight (08)long answer type questions of ten (10) marks each and    |
|       | student shall be required to attempt any four questions. Questions shall be uniformly distributed from the |
|       | entire syllabus  |

| Module       | Course Content   | No. of | POs      | PSOs   |
|--------------|--|--------|----------|--------|
|              |  | Hours  | mapped   | mapped |
| Module-<br>1 | Introduction: An overview of Database Management System, Database System Vs File System, Database system concept and architecture, data models schema and interfaces, data definitions language, DML, Overall Database Structure. Data Modeling using the Entity Relationship Model: ER model concepts, notation for ER diagram, mapping constraints, keys, Concepts of Super Key, candidate key, primary key, Generalization, aggregation, reduction of an ER diagram to tables, extended ER model, relationship of higher degree.                    | 07     | 1,2,3    | 1,2    |
| Module-<br>2 | Relational Data Model and Language: Relational Data Model concepts, integrity constraints: entity integrity, referential integrity, Keys constraints, Domain Constraints, relational algebra, relational calculus, tuple and domain calculus.  Introduction to SQL: Characteristics of SQL, Advantages of SQL, SQL data types and literals, Types of SQL commands, SQL operators and their procedure, Tables, views and indexes, Queries and subqueries, Aggregate functions, Insert, update and delete operations, Joins, Union, Intersection, Minus. | 09     | 1,2,3,4  | 1,2    |
| Module-<br>3 | <b>Data Base Design &amp; Normalization:</b> Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependencies, loss less join decomposition, normalization using FD, MVD and JDs, alternative approaches to database design.   | 09     | 1,3,4,5  | 1,2    |
| Module-<br>4 | <b>Transaction Processing Concepts:</b> Transaction system, Testing of serializability, Serializability of schedules, conflict & view Serializable schedule, recoverability, Recovery from transaction failures, log-based recovery, deadlock handling.  | 07     | 1,2,3,11 | 1,2    |
| Module-<br>5 | Concurrency Control Techniques: Concurrency Control, Locking Techniques for Concurrency control, Time stamping protocols for concurrency control, validation-based protocol, multiple granularities, multi-version schemes, Recovery with concurrent transaction, Transaction processing in Distributed system, Data fragmentation, Replication and allocation techniques for distributed system, overview of concurrency control and recovery in distributed database.  | 08     | 1,2,3,4  | 1,2    |
|              | Total No. of Hours   | 40     |          |        |

## **Learning Outcomes:**

#### **CO1 Knowledge and Comprehension:**

Define and compare Database Management Systems (DBMS) with traditional File Systems, explaining the advantages and limitations of each. Describe the core components and architecture of a Database System, including data models, schemas, interfaces, and the overall structure.

#### CO2 Application and Analysis:

Analyze and apply the principles of the Entity Relationship (ER) model, including notation for ER diagrams, mapping constraints, and the concepts of Super Key, Candidate Key, and Primary Key. Apply data modeling techniques to reduce an ER diagram to relational tables and understand the extended ER model and relationships of a higher degree.

#### CO3 Synthesis and Evaluation:

Evaluate the concepts of the Relational Data Model, including integrity constraints such as entity integrity, referential integrity, keys constraints, and domain constraints. Synthesize knowledge of relational algebra, relational calculus, tuple and domain calculus to formulate complex queries and assess their correctness.

#### CO4 Analysis and Application:

Analyze the characteristics and advantages of SQL (Structured Query Language), including SQL data types, literals, and the different types of SQL commands. Apply SQL operators and procedures effectively to create, modify, and retrieve data in database tables, as well as handle queries, subqueries, and aggregate functions.

#### CO5 Evaluation and Creation:

Critically evaluate the concepts of database design and normalization, including functional dependencies, normal forms (1NF, 2NF, 3NF, BCNF), and inclusion dependencies. Create and optimize database designs through normalization techniques involving Functional Dependencies (FD), Multi-Valued Dependencies (MVD), and Join Dependencies (JD), while considering alternative approaches to database design. Examine recoverability and recovery techniques from transaction failures, including log-based recovery and deadlock handling.

| Duana aniaita an | A  |
|------------------|--|
| Prerequisites:   | Any programming language   |
| Objectives:      | <ol> <li>Learn, understand, and remember the basic concepts of object-oriented programming paradigm in Java programming.</li> <li>Get a clear understanding of basics of java Programming.</li> </ol>  |
|                  | 3. To examine key aspects of java Standard API library   |
|                  | 4. To learn java's exception handling mechanism, multithreading, packages, and interfaces  |
|                  | 5. To learn and analyze concepts related to JDBC and java servlets   |
|                  | 6. To develop applications and analyze solutions using java technologies.  |
| Course           | Mr. Namit Khanduja   |
| Coordinator      |  |
| NOTE             | The question paper shall consist of two sections (Section-A and Section-B). Section-A shall contain Ten (10) short answer type questions of six (06) mark each and student shall be required to attempt any five (05) questions. Section-B shall contain eight (08) long answer type questions of ten (10) marks each and student shall be required to attempt any four questions. Questions shall be uniformly distributed from the entire syllabus |

| UNIT   | Module   | Course Content  | No. of<br>Hours | POs<br>mapped  | PSOs<br>mapped |
|--------|----------|---|-----------------|----------------|----------------|
| UNIT-1 | Module-1 | <b>Introduction:</b> Creation of Java, the importance of byte code, OOP Principles, Encapsulation, Inheritance and Polymorphism, data types, variables, declaring variables, dynamic initialization, scope and lifetime of variables, arrays, operators, control statements, type conversion, and casting.  | 03              | 1,2            | 1              |
|        | Module-2 | Classes and Objects: Concepts of classes and objects, class fundamentals Declaring objects, assigning object reference variables, introducing methods, constructors, usage of static with data and methods, usage of final with data, access control, this keyword, garbage collection, overloading methods and constructors, parameter passing – call by value, recursion, nested classes and inner classes, exploring the String class. | 05              | 1,2            | 1              |
| UNIT-2 | Module-3 | <b>Inheritance:</b> Basic concepts, member access rules, usage of super keyword, forms of inheritance, method overriding, abstract classes, dynamic method dispatch, using final with inheritance, the Object class.  | 04              | 1,2,3          | 1,2            |
|        | Module-4 | Packages and Interfaces: Defining, Creating, and Accessing a Package, understanding class path, importing packages, differences between classes and interfaces, defining an interface, implementing an interface, applying interfaces, variables in interface, and extending interfaces.  | 03              | 1,2,3          | 1,2            |
| UNIT-3 | Module-5 | <b>Exception Handling and Multithreading</b> : Concepts of Exception handling, types of exceptions, usage of try, catch, throw, throws, and finally keywords, Built-in exceptions, creating own exception sub-classes, Concepts of Multithreading, differences between process and thread, thread life cycle, creating multiple threads using Thread class, Runnable interface, Synchronization.  | 06              | 1,2,3,<br>9,12 | 1,2            |
| UNIT-4 | Module-6 | <b>Event Handling</b> : Events, Event sources, Event classes, Event Listeners, Delegation event model, handling mouse and keyboard events, Adapter classes  | 03              | 1,2,9,12       | 1,2            |
|        | Module-7 | JDBC: The connectivity Model, JDBC/ODBC Bridge, java.sql package, connectivity to remote Database, navigating through multiple rows retrieved from a  | 07              | 1,2,9,12       | 1              |

w.e.f. 2024 (Revised 08/07/24)

|        |          | database, selection, insertion, updating and deletion in database using JDBC.  |    |                    |     |
|--------|----------|--|----|--------------------|-----|
| UNIT-5 | Module-8 | <b>Networking and Java Library</b> : Basics of Networking, TCP/IP sockets, datagrams, using sockets and datagram sockets to transfer data. | 04 | 1,2,3,4,<br>5,9,12 | 1,2 |
|        | Module-9 | <b>Servlets:</b> Background, Life cycle of a servlet, Reading servlet parameters, Database handling using servlets.                        | 05 | 1,2,3,4,<br>5,9,12 | 1   |
|        |          | 40   |    |                    |     |

| Learning  | • Able to <i>define</i> and <i>relate</i> object-oriented programming features and concepts for solving given     |
|-----------|---|
| Outcomes: | problems. (Remember L1)   |
|           | • Able to <i>demonstrate</i> and <i>extend</i> the learned concepts for problem-solving. ( <i>Understand L2</i> ) |
|           | • Analyze and develop solutions for real-world problems.(Apply, Analyze L3, L4)                                   |
|           | • Discover requirements and Apply concepts for networking and database connectivity for solving real-             |
|           | life problems. (L3,L4)  |
|           | • Recommend and Select solutions for problems using Java web technology. (L5)                                     |

## Course Code: BCE-C407 Course Name: OPERATING SYSTEM

MM: 100
Time: 3 Hr.

L T P
Credit: 3
3 1 0

| Prerequisites: | Basic knowledge of Data Structures and Computer Organization  |  |  |  |  |  |  |  |
|----------------|---|--|--|--|--|--|--|--|
| Objectives:    | <ol> <li>Students will learn how Operating System is Important for Computer System.</li> <li>To make aware of different types of Operating System and their services.</li> <li>To learn different process scheduling algorithms and synchronization techniques to achieve better performance of a computer system.</li> <li>To know virtual memory concepts.</li> <li>To learn secondary memory management</li> </ol> |  |  |  |  |  |  |  |
| Course         | Dr.Mayank Aggarwal  |  |  |  |  |  |  |  |
| Coordinator    |   |  |  |  |  |  |  |  |

| NOTE: | The question paper shall consist of two sections (Section-A and Section-B). Section-A shall contain Ten    |
|-------|--|
|       | (10) short answer type questions of six (06) mark each and student shall be required to attempt any five   |
|       | (05) questions. Section-B shall contain eight (08) long answer type questions of ten (10) marks each and   |
|       | student shall be required to attempt any four questions. Questions shall be uniformly distributed from the |
|       | entire syllabus  |

| UNIT       | Module      | Course Content  | No. of<br>Hours | POs                | PSOs |
|------------|-------------|---|-----------------|--------------------|------|
| UNIT-<br>1 | Module-1    | Introduction: Operating Systems, Single Processor systems, Multiprocessor Systems, Clustered Systems, Mainframe Systems, Desktop Systems, Distributed Systems, Real-Time Systems, System Components, Handheld Systems, Operating System Services, System Calls, System Programs, System Structure, Operating System Design and Implementation.            | 09              | 1,2                | 1,2  |
| UNIT-<br>2 | Module-2    | Process Management: Process Concept, Process Scheduling, Cooperating Processes, Inter-process Communication, Threads, Overview of Multithreading Models, CPU Scheduling, Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Multiple Processor Scheduling, Real-Time Scheduling, Algorithm Evaluation.   | 07              | 1,2                | 1,2  |
| UNIT-<br>3 | Module-3    | Process Synchronization & Deadlocks: The Critical Section Problem, Synchronization Hardware, Semaphores, Classical Problems of Synchronization, Deadlocks, System Model, Deadlock Characterization, Methods for handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.                                  | 08              | 1,2,3,4,5,<br>9,12 | 1,2  |

| Dutem 2021 | -02e und 011/14145   |
|------------|--|
| Learning   | CO1: Knowledge and Comprehension   |
| Outcomes:  | Explain the key components and functions of various computer systems, including Single Processor,    |
|            | Multiprocessor, Clustered, Mainframe, Desktop, Distributed, Real-Time, and Handheld Systems.         |
|            | CO2: Application and Analysis  |
|            | Analyze the concepts of process management, process scheduling, and CPU scheduling in operating      |
|            | systems, comparing and contrasting various scheduling algorithms.                                    |
|            | CO3: Synthesis and Evaluation:   |
|            | Evaluate the principles of process synchronization and deadlock handling, distinguishing between     |
|            | deadlock prevention, deadlock avoidance, deadlock detection, and recovery strategies.                |
|            | CO4: Application and Analysis:   |
|            | Outcome: Apply memory management techniques, including paging, segmentation, and virtual memory,     |
|            | to address issues like thrashing, page replacement, and allocation of frames in an operating system. |
|            | CO5: Synthesis and Evaluation  |
|            | Analyze the file system and secondary storage structures, including file concepts, directory         |
|            | implementation, allocation methods, and disk management strategies, and evaluate their impact on     |
|            | system performance and reliability.  |

## **Course Code: BCE-C455**

## Course Name: Database Management System Lab

MM: 50
Time: 3 Hr.

L T P
Credit: 01

Credit: 01

| Objectives: | <ol> <li>This lab enables the students to practice the concepts learnt in the subject DBMS by developing a database.</li> <li>The student is expected to practice the designing, developing and querying a database</li> </ol> |
|-------------|--|
| Course      | Dr. Nishant Kumar  |
| Coordinator |  |

| NOTE: | <ol> <li>In practical examination the student shall be required to perform one experiment.</li> <li>A teacher shall be assigned 20 students for daily practical work in laboratory.</li> <li>No batch for practical class shall consist of more than 20 students.</li> <li>The number of students in a batch allotted to an examiner for practical examination shall not exceed 20 students.</li> <li>Addition/deletion in above list may be made in accordance with the facilities available with the approval of H.O.D./Dean</li> </ol> |
|-------|---|
|-------|---|

| LIST OF EXPERIMENTS   | No. of Hours /week | POs mapped | PSOs<br>mapped |
|---|--------------------|------------|----------------|
| 1. Create a table using SQL commands.                           | 02                 |            | 1,2            |
| 2. Perform insertion, updation and deletion on tables.          |                    |            | 1,2            |
| 3. Perform select queries on table.                             |                    |            | 1,2            |
| 4. Perform primary key, Candidate key and not null constraints. |                    | 1,2,3,4,5  | 1,2            |
| 5. Perform joins (Outer Joins).                                 |                    |            | 1,2            |
| 6. Nested Queries.  |                    |            | 1,2            |
| 7. Union, Intersection and except operations.                   |                    |            | 1,2            |
| 8. Foreign Key and Referential Integrity Constraints.           |                    |            | 1,2            |
| 9. Create View of tables.                                       |                    |            | 1,2            |
| 10. Grant and revoke permissions on tables.                     |                    |            | 1,2            |

| Learning<br>Outcomes: | <ul> <li>Create table using SQL commands and view of tables</li> <li>Apply primary key, Candidate key, not null, Foreign Key and Referential Integrity Constraints on tables</li> <li>Formulate select queries on table and joins (Outer Joins)</li> <li>Construct Nested Queries</li> <li>Evaluate Union, Intersection and except operations</li> </ul> |

## **Course Code: BCE-C456**

## Course Name: Object Oriented Programming with Java Programming Lab

MM: 50
Time: 3 Hr.

L T P
Credit: 01
Credit: 01

| Objectives: | 1. To experiment with the syntax and semantics of java language and gain experience with java programming 2. Learn to use object orientation to solve problems and use java language to implement them.  |
|-------------|--|
| Course      | Mr. Namit Khanduja   |
| Coordinator |  |
| _           |  |
| NOTE:       | <ol> <li>In practical examination the student shall be required to perform one experiment.</li> <li>A teacher shall be assigned 20 students for daily practical work in the laboratory.</li> <li>No batch for a practical class shall consist of more than 20 students.</li> <li>The number of students in a batch allotted to an examiner for practical examination shall not exceed 20 students.</li> <li>Addition/deletion in the list may be made following the facilities available with the approval of H.O.D./Dean</li> </ol> |

| LIST OF EXPERIMENTS  | No. of Hours<br>/week | POs<br>mapped | PSOs<br>mapped |
|--|-----------------------|---------------|----------------|
| 1. Classes and Objects: Programs to illustrate the concept of objects and classes.                                   | 02                    | 1,2,3,4,      | 1,2            |
| 2. Inheritance packages and interface: Programs to illustrate the concepts of Inheritance, packages, and interfaces. |                       | 5,9,12        |                |
| 3. Multithreading: programs to illustrate concepts of multithreading in Java.  |                       |               |                |
| 4. Event Handling: programs in Java to handle Mouse and Keyboard events.   |                       |               |                |
| 5. Java Database Connectivity: Programs to connect, control, and manipulate databases.                               |                       |               |                |
| 6. Program to create a database application in Servlets.   |                       |               |                |
| 7. Program for connection-less and connection-oriented communication.  |                       |               |                |

| Learning  | Illustrate the concept of objects and classes via Java program(L2)                   |
|-----------|--|
| Outcomes: | Illustrate the concepts of Inheritance, packages and interfaces via java program(L2) |
|           | Design program in Java to handle Mouse and Keyboard events(L6)                       |
|           | Apply write, read data using different types of communication modes.(L3)             |
|           | Create a database application in Servlets via java program(L6)                       |

|                    | CO-PO/PSO MAPPING |     |     |     |     |     |     |     |     |      |      |      |      |                                     |  |
|--------------------|-------------------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|-------------------------------------|--|
| Course<br>Outcomes |                   |     |     |     |     |     |     |     |     |      |      |      |      | Program Specific<br>Outcomes (PSOs) |  |
| (COs)              | РО                | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2                                |  |
| CO1                | 3                 | 1   |     |     |     |     |     |     |     |      |      |      | 1    | 1                                   |  |

Course Code: BCE- S460 Course Name: Project-I

MM: 50 Time: 3 Hr. L T P

0 0 2

Sessional: 15 ESE: 35 Credit: 3

The project is to be done by students in batches with maximum number of students four. Project must focus on solving some problem and demonstrate the skills learned till fourth semester. Examples of projects can be taken from various hackathon conducted from time to time by different organizations/companies.
